

Ahmed Lhaouchi Briki

FULL STACK DEVELOPER | JAVA • SPRING BOOT • NESTJS • AWS

CONTACT

- **Github:** github.com/AhmedLB05
- **Phone:** +34 631 088 579
- **LinkedIn:** linkedin.com/in/ahmedLB/
- **Email:** ahmedlhabri26@gmail.com
- **Location:** Jaén, Spain

EDUCATION

- **Higher Technician in Multiplatform Application Development**
- IES Fernando III · Spain
- 09/2024 – 06/2026

ABOUT ME

Full Stack Developer specialised in Java (Spring Boot) and NestJS/TypeScript backends, and frontend development with Angular and Flutter. Experienced in designing, deploying and maintaining microservices architectures on AWS, with hands-on production exposure including CI/CD pipelines with Docker. Skilled in relational and NoSQL databases (MySQL, PostgreSQL, MariaDB, DynamoDB) and mobile application development with Flutter/Dart. Committed to Clean Code standards, automated testing with JUnit 5, and security best practices to deliver scalable, maintainable software. Fluent in English (B2), Spanish (native) and French (A2); conversational Arabic.

LANGUAGES

- **Spanish (native)**
- **English (B2)**
- **French (A2)**
- **Arabic (spoken)**

SKILLS

- **Java & Backend Ecosystem:** Java, Spring Boot, Maven, Hibernate, JPA, JUnit 5, Microservices.
- **Node.js & TypeScript:** NestJS, Node.js, TypeScript, REST APIs.
- **Frontend & Cross-Platform:** Angular, JavaScript, Flutter, Dart, JavaFX.
- **Databases & Cloud:** MySQL, PostgreSQL, MariaDB, SQL Server, DynamoDB, AWS, Docker.
- **Methodologies & Other:** CI/CD, DevOps, Clean Code, Git/GitHub, LDAP, Security criteria, Agile.

EXPERIENCE & PROJECTS

- **Backend & Full Stack Developer · Internship · 03/2026 – 06/2026**
 - Healthcare company · Production environment · Spain
 - Reduced server response processing time by ~30% by refactoring NestJS + TypeScript services into a microservices architecture with decoupled endpoints and in-memory caching.
 - Delivered a survey system for hospital kiosks with 0 incidents in the first 4 weeks of production, integrating LDAP authentication, API Key management, and CI/CD via Docker for continuous deployment in the hospital environment.
 - Ensured data integrity across 3+ simultaneous environments (MySQL, PostgreSQL, MariaDB) by applying versioned migrations and regression testing with JUnit 5, eliminating data loss between staging and production phases.
- **Full Stack Developer · Personal Project — Mobile App · 01/2026 – 03/2026**
 - Independent development · AWS · Spring Boot · Flutter
 - Designed and deployed a full end-to-end mobile app in production with <200 ms average API latency, using Java Spring Boot + Hibernate/JPA on the backend and Flutter on the client, orchestrated on AWS with Docker.
 - Achieved high availability (>99% uptime during testing period) using DynamoDB as the NoSQL layer and configuring auto-scaling on AWS, simulating real load conditions with automated tests.
 - Reduced the deployment cycle to a single command by designing a CI/CD pipeline with Docker and automated build scripts, applying DevOps principles of continuous integration and delivery from the first iteration.
